Education

Bahria University <i>Bachelor of Science in Computer Science</i>	Islamabad, Pakistan <i>Sept. 2020 – July 2024</i>
Codecademy <i>Data Scientist: Natural Language Processing Specialist (Career Path)</i>	<i>Oct. 2023 – Oct. 2024</i>

Professional Experience

Neural Lines <i>Python Engineer</i>	Remote <i>Feb. 2025 – Nov. 2025</i>
• Legal Document Management System: Engineered an agentic LangGraph pipeline for an AI-powered legal document management system at a major law firm, automating document review and case timeline generation, reducing manual review time by 85% (2–3 weeks to 2–3 days). • Built intelligent document processing using AWS Textract and Tesseract OCR to parse and segment 1,000+ page legal bundles into context-specific sub-documents, achieving 90% timeline accuracy improvement with automated dispute detection. • Developed a conversational AI assistant for real-time case analysis with smart document mapping, increasing lawyer productivity by 70% by eliminating manual document organization. • ShamelaGPT (Production RAG System): Architected and deployed ShamelaGPT (shamelagpt.com), a production RAG system over 8 million pages of Arabic Islamic literature using AraBERT embeddings and Pinecone, improving research efficiency by 90%. • Enabled multilingual semantic search and cross-lingual Q&A across thousands of Islamic scholarly texts via Gemini 2.0 Flash, serving students and researchers globally. • Technologies: FastAPI, LangChain, LangGraph, LangSmith, AWS (Textract, S3), PostgreSQL, Alembic, AraBERT, Pinecone, Gemini 2.0 Flash, Python, Selenium.	
HeadStarter <i>Software Engineering Fellow</i>	Remote <i>July 2024 – Sept. 2024</i>
• Shipped 5 AI-powered full-stack applications in 7 weeks, including a medical symptom-checking chatbot and a smart inventory tracker. • Collaborated globally in virtual hackathons to rapidly prototype and deliver scoped AI products utilizing Next.js, LangChain, Pinecone, and Llama.	
Red Buffer <i>Full Stack Intern</i>	Islamabad, Pakistan <i>July 2023 – Sept. 2023</i>
• Contributed to REST API development and testing across client projects using the MERN stack, with focused training on scalable backend architecture and PostgreSQL query optimization.	

Projects

AI-Powered Factory Monitoring Dashboard <i>Python, FastAPI, React, LangGraph, Pinecone, WebSockets, PostgreSQL</i>
• Architected a real-time HMI dashboard streaming machine telemetry via WebSockets and built a LangGraph RAG diagnostic copilot combining live SQL metrics with Pinecone vector PDF manuals for instant anomaly troubleshooting.

Technical Skills

Languages: Python, JavaScript, Node.js, SQL, C++, Bash
AI/ML: LangChain, LangGraph, LangSmith, RAG Pipelines, Pinecone, Scikit-Learn, NLTK
Backend & Cloud: FastAPI, REST APIs, PostgreSQL, Alembic, AWS (Textract, S3), Docker, Express.js
Frontend: Next.js, Flutter, React
Developer Tools: Git, GitHub, Postman, Selenium, BeautifulSoup, Tesseract OCR, Linux/Unix
